CLAIMS

1. A method for producing a sustained-release composition, which comprises mixing an aqueous solution containing a physiologically active substance and an acid or base in a molar amount of about 1.5 or more times that of the physiologically active substance with a solution of a biodegradable polymer, and then drying the mixture.

- 2. The method according to claim 1, wherein the aqueous solution is obtained using a salt of the physiologically active substance with the acid or base.
- 3. The method according to claim 1, wherein the proportion of the physiologically active substance in the sustained-release composition is about 0.001 to about 50% by weight.
- 4. A method for stabilizing a mixture of an aqueous solution containing a physiologically active substance and a solution of a biodegradable polymer, which comprises adding an acid or base in a molar amount of about 1.5 mol or more times that of the physiologically active substance.
- 5. A method for allowing a mixture of an aqueous solution containing a physiologically active substance and a solution of a biodegradable polymer to have a viscosity of about 3,000 cp or less, which comprises adding an acid or base in a molar amount of about 1.5 mol or more times that

of the physiologically active substance.

15

- 6. The method according to any one of claims 1, 4 and 5, wherein the physiologically active substance is a physiologically active peptide.
- 5 7. The method according to claim 6, wherein the physiologically active peptide is an LH-RH derivative.
 - 8. The method according to claim 7, wherein the LH-RH derivative is a compound represented by the general formula:
- 5-oxo-Pro-His-Trp-Ser-Tyr-Y-Leu-Arg-Pro-Z wherein Y represents DLeu, DAla, DTrp, DSer(tBu), D2Nal or DHis(ImBzl) and Z represents $NH-C_2H_5$ or $Gly-NH_2$.
 - 9. The method according to any one of claims 1, 4 and 5, wherein the acid or base in a molar amount of about 1.5 to about 5 times that of the physiologically active substance is used.
 - 10. The method according to any one of claims 1, 4 and 5, wherein the acid or base in a molar amount of about 1.65 to about 3 times that of the physiologically active substance is used.
 - 11. The method according to any one of claims 1, 4 and 5, wherein the acid is an organic acid.
 - 12. The method according to claim 11, wherein the organic acid is a fatty acid.
- 25 13. The method according to claim 12, wherein the fatty

acid is acetic acid.

- 14. The method according to any one of claims 1, 4 and 5, wherein the biodegradable polymer is an α -hydroxycarboxylic acid polymer.
- 5 15. The method according to claim 14, wherein the $\alpha-$ hydroxycarboxylic acid polymer is a lactic acid-glycolic acid polymer.
 - 16. The method according to claim 15, wherein the molar ratio of lactic acid to glycolic acid in the lactic acid-glycolic acid polymer is 100:0 to 50:50.
 - 17. The method according to claim 16, wherein the molar ratio of lactic acid to glycolic acid in the lactic acid-glycolic acid polymer is 100:0.
- 18. The method according to claim 15, wherein the weight average molecular weight of the lactic acid-glycolic acid polymer is 5,000 to 50,000.
 - 19. The method according to claim 15, wherein the weight average molecular weight of the lactic acid-glycolic acid polymer is 17,000 to 30,000.
- 20. The method according to claim 1, wherein the biodegradable polymer is a lactic acid polymer having a weight average molecular weight of 15,000 to 50,000 and the content of a polymer having a weight average molecular weight of 5,000 or less in said lactic acid polymer is 5% by weight or less.

- 21. The method according to claim 1, wherein the biodegradable polymer is a lactic acid-glycolic acid polymer having about 20 to about 1,000 μ mol of terminal carboxyl per unit mass (gram) of the polymer.
- 5 22. The method according to claim 1, wherein the molar amount of the terminal carboxyl of the biodegradable polymer is about 0.1 to about 5 times that of the physiologically active substance.
- 23. The method according to any one of claims 1, 4 and 5, wherein the solution of a biodegradable polymer is prepared using a low water-soluble organic solvent.
 - 24. The method according to claim 23, wherein the low water-soluble organic solvent is dichloromethane.
 - 25. The method according to any one of claims 1, 4 and 5, wherein the mixture is a homogeneous mixture.

- 26. The method according to claim 25, wherein the homogenous mixture is an emulsion.
- 27. The method according to claim 26, wherein the emulsion is a W/O type emulsion.
- 20 28. The method according to claim 27, wherein the particle size of the W/O type emulsion is very small.
 - 29. The method according to claim 1, wherein the drying of the mixture is in-water drying.
- 30. The method according to claim 29, wherein an aqueous solution of an osmotic pressure regulating agent is used as

an outer aqueous phase on the in-water drying.

5

- 31. The method according to claim 30, wherein the osmotic pressure regulating agent is mannitol.
- 32. The method according to claim 1, wherein the sustained-release composition is in the form of a microparticle.
- 33. The method according to claim 32, wherein the microparticle is a microsphere or a microcapsule.
- 34. A method for producing a sustained-release composition,

 which comprises mixing an aqueous solution containing 1) a

 physiologically active substance and 2) an acid or base in

 an amount of about 0.1 to about 20% by weight of said

 aqueous solution with a solution of a biodegradable polymer,

 and then drying the mixture.
- 35. The method according to claim 34, wherein the aqueous solution is obtained using a salt of the physiologically active substance with the acid or base.
 - 36. A sustained-release composition produced by the method according to claim 1.
- 20 37. A use of an aqueous solution containing physiologically active substance and an acid or base in a molar amount of about 1.5 or more times that of the physiologically active substance, for producing sustained-release containing preparation the

25 physiologically active substance.
